

TOOLS

INOVYN is responsible for preventing ill health and creating a good working environment. The company has decided that safe and ergonomic tools must be used as far as possible, to avoid work procedures that are harmful to health. The company employees and hired personnel must therefore use safe and ergonomic tools.

The following is a list of the tools to be used:

- Knives without points
- Angle grinders with brake **and kick back stop**
- Low vibration machines such as nut runners and reciprocating saws

Sometimes special tools are required, for example, pullers we have manufactured ourselves. Self-manufactured tools must always be manufactured based on a risk analysis. Manufacturing or modifying tools without a risk analysis is not permitted.

Low vibration tools must be used to prevent "white finger".

The instruction HMSS-329 Arbete på hög höjd, describes what applies regarding regulations to avoid falling objects (tools).
